Since, every house has a unique aesthetic value attached to it, at **Guru Upvc** we understand how much a window can alter your house's artistry
- ▶ Consequently, our expert engineering team has come up with innovative window solutions that span across designs ranging from sliders to casements to bays to tilt-and-turns to villa until combination windows. You can select any of these designs and customize them according to the interiors of your home.

Our Special Colour Profile

We Provides you Door's & Windows in Different Colours to fulfill the desire of our esteemed customers with New Range of Colours.

Guru Upvc Accessories

We Accessories are very easy to operate & coated in Differ Colour Combination for our client to make our product suitable.

OUR PRODUCT RANGE

Casement Windows

A casement is a window that is attached to its frame by one or more hinges. Casement windows are hinged at the side. (Windows hinged at the top are referred to as awning windows. Ones hinged at the bottom are called hoppers.)

We are a leading Manufacturer, Supplier and Exporter of UPVC Casement Window. We have a team of highly skilled workers who provide optimum range of UPVC Casement Window to our esteemed clients. We can manufacture the UPVC Casement Windows effortlessly owing to the high grade infrastructure and skilled labor and so we supply and export them at a very low price.

Hinged on one side and opening away from the house, casement windows are a very popular type. Their simple design helps to ensure that an interior receives the most possible available light.

Sliding Windows

A sliding window is basically made up of horizontal sashes that move sideways with the help of rollers at the bottom of the sashes. They can span from the floor to the ceiling, span entire walls or even come in the dimensions of a regular small window. UPVC slider window variants available with Guru upvc can be customized to best suit your specific needs. The sash size and overall size can be altered according to your room's interior. Guru upvc also specializes in carrying out replacement tasks. If at all you are unhappy with the performance of your current window, Guru upvc slider windows will solve your problem.

Tilt and Turn Windows

These cleverly-designed windows can both open to the side and from the top. They make a safe option if you have young children, as they can be left open at just a fraction – enough to let some fresh air in, but not enough to climb out of. Thanks to the top opening feature, they are also very easy to clean.

Bay Windows

A bay window is one of the most sophisticated windowpane designs that have been quite popular for a long time. They give your room a spacious feel along with a stylish look to the interior as well as the exterior. The designs in this category are flexible as they allow different styles to come together. Due to this flexibility, all the other plans namely casement, slider and tilt can be rolled into a single bay prototype. These can be combined and fit at an angle of 90 degrees or 135 degrees with each other with the help of a bay pole. So, the bay windowpane is the most flexible plan offered. Bay windows are perfect for creating a private little corner in your home for yourself. They also add a dramatic touch if they're installed in your living room as the focal and conversational point.

Sliding Door

Guru upvc offers sliding doors for living rooms, bedrooms, kitchens and balconies. The sliding Door is made up of two (or more) sashes that slide horizontally, to the left or right, on tracks. The doors can be made wider and taller with the addition of sashes. The sliders work on a 'ride over'

Casement doors and windows are side hung with two sashes that can be opened on either side. These windows are also known as French Windows that have a single sash side hung and joined with a bigger portion.

Casement Doors

Folding Door

- Folding Doors are the horizontally moving folding doors that find application in premises that have limitation of spaces around door opening. Also providing for minimized roof space inside buildings, the entire opening process is highly visible which makes passages safer. The options include 220 that functions as insulated Folding door that is preferred in premises with high daylight inlet demands, 220C that is ideal door for car washes and is especially developed for coping with harsh as well as humid environment. mechanism.

- Coming with anodized aluminum design backed with anti-corrosive features as well as glazing alternatives, its side-going movements assists in eliminating dripping possibilities. Lastly, the option offered by us under this includes 521 that find usage in demanding industrial applications and comes with extra strong frame construction as well as thick, insulated door panel support.

- ▶ Cleanliness of a household is the major concern of every home maker. The gaps between wall and window are sealed with silicon whereas windows come with double seals in the form of EPDM gaskets or wool pile. This tight fit ensures a dust free home. Moreover, teaming up a window with double glazed toughened glass can cut down noise pollution and also enhances security. Guru upvc windows come with a multiple point lock system to ensure a high security for your home. The locks can be chosen according to the window's colour or the interior's needs. They are easy to operate and one swift movement is enough to lock them.

Guru upvc window locks are available in white, chrome, black and gold shades. The casement window locks especially have been stylishly crafted to provide a chic look to your doors and windows.

- ▶ Guru upvc has successfully installed over a million windows all over India. Call up a

Guru upvc representative today and with the help of our expert engineering team, figure out the best possible window solution for your premises. We ensure you a smooth journey right through design conception up to delivery. It's time to live life king size!
